

Next Train Indicator

The 3 Line LED Next Train Indicator has been specifically designed to display real-time next train information to passengers on railway platforms. The three-line LED NTI display allows for three independent lines of text to be displayed with horizontal and vertical scrolling capabilities on each line. This combination allows full details to be shown for the first train departure with the option of showing basic details for the following train if desired.

Key Product Features

- 3 Lines with 32 characters per line
- 66mm 9 pixel high font allowing full descenders to be used.
- Aluminium enclosure with polycarbonate or laminated safety glass front screen, anti-reflective surface treatment.
