

New York Totem

Trueform have extended our wayfinding portfolio to New York City with the contract award for the Fabrication and Installation of Wayfinding Infrastructure in Lower Manhattan, Borough of Manhattan and New York City.

There was a huge attendance from all involved in the contract and USA press when the first sign was being installed.

As leaders in the provision of wayfinding infrastructure systems, Trueform carried out this work from our new service centre in Long Island, New York, to provide the required local presence and operating facilities. The depot is fully equipped for this contract on a 24/7 basis.

Trueform were responsible for the full design, structural engineering, full manufacture, assembly and installation of the full product range of signage structures.
