

Products & Services Catalogue

UK's Leading Suppliers of Public Transport Hardware

London, Manchester, Leeds, Glasgow, Las Vegas, Vancouver, Portland, Austin, Abu Dhabi... these great cities all have something in common: they run successful public transport systems.

We at Trueform are proud to say that over the years we have helped to develop and support these systems, and many others, by providing, products, specialist custom manufacturing, installation and maintenance services to enable them to run reliably and efficiently.

To date we have completed in excess of 250,000 installations Worldwide.

Mobility, security and sustainability are the central basis for economic growth and prosperity in our globalized world. Trueform provide intelligent public transport products and specialist engineering solutions to meet these requirements.

Working in close collaboration with leading transport authorities, consultants, architects and designers, we provide a comprehensive range of hardware products, signage systems, electronic information displays and custom manufacturing and installation services for the bus, rail, light rail metro, tram, BRT and airport public transport sectors as well as cycling and pedestrian wayfinding schemes.

This catalogue contains an overview of Trueform's comprehensive range of products and services. For further details on these products or to discuss our range of 'bespoke' design and manufacturing services please contact our customer support team.

We would be delighted to discuss your individual project requirements with you.

Our range of services includes:-

- **A comprehensive catalogue of standard products,**
- **Design engineering, CAD & Manufacturing services for bespoke products**
- **Prototyping development & In house manufacturing**
- **Installation, maintenance and support**

- **Bus**
- **Rail**
- **Airports**
- **Light Rail Metro**
- **Tram**
- **Bus Rapid Transit**
- **Cycling & Pedestrian**

Section 1

Transit Shelters, Enclosures, Canopies, Walkways, Transport Interchanges, Waiting Rooms, Ticket Booths

- Bus Shelters
- Rail Waiting Shelters
- Tram & Metro Shelters
- Bus Rapid Transit (BRT) Shelters
- Waiting Rooms
- Specialist Enclosures
- Canopies
- Covered Walkways
- Smoking Shelters
- Cycle Shelters
- Glazed Screens & Windbreaks
- Bespoke Structure Design and Manufacturing
- Counter Terrorism Solutions / Blast Resistant Structures
- Station Infrastructure Architectural Metalwork & Fabricated Structures

Section 2

Bus Stops & Accessories

- Bus Stops & Systems
- Temporary Bus Stops
- Bus Stop Flags & Flag Graphics
- Bus Stop Timetable Displays (please refer to section 3)
- Solar Bus Stops (please refer to section 10)
- Bespoke Bus Stop Design and Manufacturing Service

Section 3

Signage, Display Cases, Timetables, Station Identifiers & Wayfinding Signage Systems, 6 Sheet Advertising Displays

- Station Totems & Identifiers
- Signage Systems
- Timetable Displays Cases
- Poster Frames & Displays
- Directional Signage
- Wayfinding Signage Systems
- Finger Posts
- Cycle Scheme Signage
- 6 Sheet Advertising Displays
- Signage Graphics Production
- Wayfinding Signage Graphics & Mapping Panels
- Vitreous Enamel Signage

Section 4

Seats & Seating

- Shelter Seating
- Freestanding Seating
- Bench, Perch & Cantilever Seating
- Station Concourse Seating
- Underground Seating
- Custom Seating

Section 5

Counter Terrorism & Security Solutions

- Bomb Blast Protected Shelters and Enclosures
- Bomb Blast Protected Glazed Screens
- Perimeter VBIED Security Bollards (BSI PAS 68)
- Perimeter VBIED Security Bollards (BSI PAS 69)
- CCTV Security Systems
- Bomb Blast Resistant Litter Bins

Section 6

Electronic Information Displays, Kiosks & RTPI Systems

- Shelter RTI Displays
- LED / LCD Displays
- Customer Information Systems
- Platform Displays
- Touch Screen Displays
- Journey Planning Kiosks
- Low Power (solar) Displays
- Bus Stop Flag Displays
- Full Matrix Flag Displays
- Electronic Service Update Boards
- Customer Help Points
- Trapeze Display Range

Section 7

Solar Power Systems

- Solar Development & Engineering Overview
- Solar Shelter Solutions
- Solar Stop Solutions

Section 8

TfL Approved Products

Roundels & Station Identifiers
Signage, Signage Systems & Publicity Displays
Service Information & Service Update Boards
Bus Stops, Taxi Stops & Temporary Bus Stops
Shelters, Canopies, Walkways, Glazed Screens, Windbreaks,
Waiting Rooms, Staff Accommodation & Assistance Units
Bus Stations & Interchanges
Bespoke Architectural Metalwork & Fabrication
Legible London Wayfinding Signage System
Cycle Super Highway & Cycle Hire
Electronic Displays, Kiosks & Help Points
Seating & Litter Bins
Solar Power Systems
Station & Interchange Accessories
Bollards
Balustrades & Handrails
Railings & Fencing
Installation & Maintenance Services

Section 9

Airport Approved Products

FIDS Units
Blast Protected Shelters, Canopies and Glazed Screens
Balustrades, Buggy Rails & Handrails
Cladding Panels & Column Cladding
Signage Systems
Customer Information Units
Trolley Corrals & Barriers
Construction Related Metalwork Services
Check-in Areas
Door Entrance Portals
Site Fitting & Erection Services

Section 10

Litter Bins & Ashtrays

Platform Litter Bins & Trash Receptacles
Ashtrays

Section 11

Bollards, Barriers, Bike Racks & Stations Hardware

Freestanding Bollards
Sheffield Cycle Racks
Custom Barriers

Section 12

Installation, Civils, Site Erection, Cleaning, Maintenance & Asset Management Services

Installation, Civils & Site Erection Services
Cleaning & Maintenance Services
Electrical Commissioning & Maintenance
Asset Management & Audit Services
Project Management

Section 13

Custom Product Design & Engineering, Graphic Design, Map & Timetable Design, Transport Planning & Advisory

Design & Engineering Services
Map & Timetable Design
Graphic Design
Transport Planning & Advisory Services

Section 14

Intelligent Transport & Data Management Systems Software & Hardware Interface to Systems Integrators

Intelligent Transport & Data Management Systems
Software & Hardware Interface to Systems Integrators

Section 15

Construction Related Metalworks Fabrication, Metal Fabrication Services, Fabricated Products

Construction Related Metalwork Fabrication
Metal Fabrication Services
Fabricated Products
Project Management
Installation & Site Fitting
Modular Construction & Erection Methods

Section 16

New Product Innovation & Development

Through innovation, design and technology, we are continuously evolving our product range to develop the most progressive, effective and efficient products.

We make it a business priority to keep our customers informed of these product innovations and aim to bring them to the market in the quickest lead time.

Transit Shelters

Flight Shelter

- - Available in a range of configurations & sizes
- Modular, flexible & innovative design & construction
- Contemporary architectural aesthetics & detailing
- Engineering grade construction & materials
- Future proofed & technology enabled
- Incorporates Intelligent, electronic transport hardware
- Optimum passenger protection, comfort & safety
- Ultimate transport marketing platform
- Robust and vandal resistant
- Range of high grade material & finish options for long lasting performance
- Quick release yet tamper proof features for rapid, cost effective maintenance
- Compliant with BSI structural standards & regulations
- Fully DDA & ADA compliant
- Ability to accept RTP1 displays, CCTV, audio PA, solar, kiosks and other advanced information systems
- Range of foundation and installation options available
- Range of glazing materials and options available
- Special 'shock absorbing' glazing retention system
- The choice of many major Cities

Solar Air Conditioned Shelter

→ Trueform, the leading provider of public transport products and services and solar power solutions has introduced the World's First energy efficient and environmentally friendly 'Solar Powered Air Conditioned Passenger Waiting Shelter'.

The strikingly designed shelters can be installed and fully operational in under a day and offers the benefit of operating without the need to install costly power supply cables or carry out disruptive road excavation.

Running costs are minimal and the high reliability of the unit means that there is little need for maintenance.

Experience from around the World has proven that just putting up a basic waiting shelter or stop is not enough. Transport networks need the technology with which the travelling public have up to date travel information whilst waiting in a safe, secure, comfortable and climate controlled environment for an efficient reliable public transport service.

Anti Vandal Rail Waiting Shelter

Designed specifically for rail platforms and bus waiting applications, the robust Metroplan anti-vandal stainless steel shelters are capable of resisting the most determined of vandals by the introduction of a stainless steel structure and special stainless steel glazing system. Stainless steel shelters have been proven to significantly reduce maintenance costs, particularly on unmanned rail stations and vandal prone bus shelter sites

Interactive Wayfinding

→ Trueform provide a wide range of interactive and non-interactive digital display wayfinding products in a variety of designs to suit individual customer requirements.

Successfully installed in many locations, Trueform provide the entire product - an end to end solution. Products and services include external kiosk structure, associated graphics, signage and branding, all internal electronic hardware, daylight readable displays, internal PC's and full impact resistant display screens. All products are fully ingress protected from the elements, utilise thermal control engineering dynamics and are fully tested and approved for external on street use.

Trueform also provide a full content management design and/or take digital data feeds from third party supplied and systems integrators.

Counter Terrorism & Security Solutions

Product Name	Reference
Introduction	
Bomb Blast Resistant Glazed Screens & Shelters	5A 001

Counter Terror & Security Products

Protect your employees, customers and property from terrorist attack

The worldwide political climate has made it more critical than ever for organisations to physically protect buildings, crowded places and the people who frequent them from terrorist attack.

Terrorist targets include key government, public and commercial buildings as well as crowded places such as shopping centres, sport venues, airports, public transport terminals, bus and railway stations.

The personal cost of death and injuries can be considerable, and is exacerbated by disruption to the efficient running of business and public services due to damage to property and infrastructure.

Many companies and public organisations are now implementing anti-terror protection systems in response to government initiatives on protecting people in public spaces.

Government Agency Driven

In order to combat terrorist threats the UK government has instigated a counter terrorism strategy, which is driven by a number of government agencies, the Home Office, Office for Security and Counter-Terrorism, working closely with the UK Police, and the Centre for the Protection of National Infrastructure (CPNI).

Centre for Protection of National Infrastructure

The CPNI encourages the implementation of physical security measures to locations at potential risk and provides security advice, awareness and training, including designing out vehicle borne terrorism.

National Counter Terrorism Security Office

The National Counter Terrorism Security Office coordinates the activities of local police force Counter Terrorism Security Advisers (CTSAs) who deliver guidance on protecting a wide range of assets, including crowded places

Trueform's Solutions

In response to this threat, Trueform has developed and tested a range of security and anti terrorism products and patented specialist bomb blast protection systems in order to help maintain safety and security, and dramatically minimise disruption should a terrorist attack occur.

Bomb Blast Resistant Glazed Screens & Shelters

Trueform's high strength bomb blast resistant structures are designed to conform to and have been extensively tested to recognised UK, US and international bomb blast standards, typically 100kgs of high explosive at 25 metres range. The high strength steel framed structures are fitted with bomb blast rated enhanced glass uniquely secured using Trueform patented ultra-high strength 'dry fit' retention system.

Trueform have recently installed its bomb blast resistant waiting shelters, check-in areas, door entrance portals and retail enclosures at the UK's Heathrow, Gatwick and Edinburgh airports.

The ultra high strength construction incorporates Trueform's high strength bomb blast rated shallow foundation and thus provides robust physical protection, including protection against explosive attack by a vehicle borne explosive device (VBIED).

Please ask to see our Bomb Blast Protection Brochure for further details.

→ Regular Glazing	→ Typical Safety Glazing	→ Trueform Bomb Blast Protected Structure
<ul style="list-style-type: none"> → Georgian Window Glass → Float / Annealed Glass → Heat Strengthened Glass → Toughened Glass → Acrylic <p>Regular glazing provides very little protection against bomb blast. Death or serious injury from broken glass and shrapnel is highly probable.</p> <p>Hazard Level: [Low]</p>	<ul style="list-style-type: none"> → Standard Laminated Annealed → Anti-Shatter Films → Polycarbonate <p>Although less likely to shatter, and produce the same levels of shards as regular glazing systems, these glazing types offer limited protection as glazing remains in place inadequate to prevent the entire glazing panel being blown out of its frame. Causes significant risk of death or serious injury.</p> <p>Hazard Level: [Medium]</p>	<p>trueform</p> <p>Special bomb blast rated laminated glass with specially enhanced interlayer and Trueform's ultra high strength dynamic 'dry fit' retention system (patent pending).</p> <p>Unique 'dry fit' system provides instantaneous protection unlike any other system that also takes many days to work.</p> <p>Hazard Level: [High]</p>
<p>During the explosion</p> <p>Shockwave impact</p> <p>After the explosion</p> <p><small>Not showing single glazing as it is more likely to be blown away than the other two types of glazing.</small></p>	<p>During the explosion</p> <p>Shockwave impact</p> <p>After the explosion</p> <p><small>Not showing single glazing as it is more likely to be blown away than the other two types of glazing.</small></p>	<p>During the explosion</p> <p>Shockwave impact</p> <p>After the explosion</p> <p><small>Not showing single glazing as it is more likely to be blown away than the other two types of glazing.</small></p>

Digital Display Specialist

→ Trueform subsidiary company Ferrograph provides specialist intelligent display solutions for transportation and media applications across bus, underground and over-ground rail and air passenger networks. Ferrograph's extensive range of quality LCD, LED, TFT and projection displays have been specifically designed and engineered to provide clear and accurate, up to the minute travel information to passengers.

Trueform Ferrograph are pioneers in the field of ruggedised public information displays and has established a reputation as the leading experts in bespoke electronic passenger display solutions.

Trueform Ferrograph have a strong transport customer base in rail, bus and air as well as local authorities and other private and public organisations. Long established supply relationships with software companies and systems integrators enables them to offer a complete solution – from design, manufacture through to installation and service support.

Trueform Ferrograph's strength is the ability and experience to package any chosen Display Technology into a working product solution for Public Transportation Applications

Bus Shelter Displays

→ Key Product Features

LED and LCD display technology versions

Optional Full Matrix 180 x 32 pixel format allowing a fully flexible display format.

3 Lines x 30 Characters standard

9 pixel high Characters as standard for DDA compliance

Lightweight aluminium enclosure construction with IP65 ingress protection rating

Vandal resistant polycarbonate front screen

Environmental control including impact detection and diagnostic control

Product has been integrated by:

ACIS (re-brand this product Tay), Trapeze ITS,

JMW, Ineo Systrans,

Connexions, Thales

Winnipeg Transit Displays

→ Winnipeg, Manitoba, Canada - design and supply of LED real time bus information displays and bus shelter and stop hardware. Trueform and Ferrograph have designed a bespoke bus stop solution for Winnipeg, working closely with the client's chosen architect and system integrator. 2 sign types have been designed for this client

Key Product Features

Type A: 3 Lines x 36 Characters standard

Type B: 10 Lines x 18 Characters standard

9 pixel high characters as standard for DDA compliance

Cast Aluminium lightweight construction

Integrated 47mm high clock

Tough all-weather construction manufactured to IP65

Vandal resistant polycarbonate front screen

Environmental control including impact detection and diagnostic control

Optional cold weather protection with integrated fans and heaters

Ferrograph designed and manufactured heating and cooling system to enable operation between -55 °C and +50°C

Toulouse Displays

→ Design and supply, of 145 LED full matrix bus and tram displays for Toulouse.

Scope of project:

96 Single sided Bus Displays – LED Full Matrix

42 Double sided Tram Displays – LED Full Matrix

7 Double sided Platform Indicator Displays

Key Product Features

Fabricated lightweight aluminium enclosure with polyester powder coat finish

Enclosure Ingress Protection (IP) rating of 65, making it fully capable of operating in an outdoor environment

Impact resistance will be designed to IK7

Additional lacquer coating to maximise protection from vandalism and aid removal of graffiti

9 pixel high characters as standard for DDA compliance

Laminated toughened glass screen which will have an anti-glare coating and medium brown tint to provide a better viewing contrast

Designed to interface with the existing mounting structures, through the use of Ineo's proprietary interface casting

Interactive Displays - Kiosk

→ Ferrograph rugged Interactive Kiosk provides real-time digital information to the travelling public in outdoor and unsecured areas

Next bus and train service information is combined with a local Point of Interest and Journey Planning services. Ideal for use in:

Transport interchanges

Bus stations and high use stops

Railway platform or concourse applications

Tramstop or LRT applications

Key Product Features

19" TFT Summary screen at top front face

17" TFT at user height, front face

Touch-screen using Projected Capacitive Technology (PCT)

Secure Web based browser with on-line Journey Planning and approved website access

Tough IP65 stainless steel enclosure with laminated safety glass front screen, anti-scratch / anti-reflective surface treatment

LAN communication as standard

Optional communications: Wi-Fi, 3G & ADSL

Solar Power & Renewable Energy Systems

→ Introduction

Trueform are a leading developer and provider of stand alone 'off grid' solar powered street furniture products. Trueform have installed over 10,000 solar installations Worldwide.

Continuous Development & Research

Trueform undertakes a continuous programme of solar and renewable energy research, development and engineering.

Trueform's dedicated solar engineers work continuously on leading edge solar, LED energy management and battery technology developments to ensure that we are supplying the most reliable, value for money solar products at all times.

Trueform's UK solar development headquarters is supported by our overseas Solar R&D development centres in China and Australia.

Trueform operate internationally and have divisions and contracts in the USA, Canada and the Middle east. Trueform are therefore able to adopt and harness best solar practice on a global basis.

In addition to a range of solar products for the passenger transportation industry, Trueform delivers custom designed solar, LED lighting and renewable energy solutions to meet specific customer requirements.

Solar Systems & Research & Development

→ System Development

Trueform has developed a range of 'off grid' solar solutions for use primarily in the public transport and wayfinding signage sector. The designs include complete 'systems' for fully automated operation 24/7, with bespoke design intelligent solar energy management systems, LED lighting units, wiring harnesses, solar PV arrays, batteries and associated enclosures that have been specifically developed for a range of individual products, applications and climates (UK, USA & Middle East).

The development has included solar courtesy / information lighting systems for bus stops, bus shelters, information displays, advertising displays, signage systems, fare payment/ticket machines and RTI displays.

Areas of in House Specialism

- Solar Energy 'Optimization, Management and Electronic Control Systems'
- Leading edge LED lighting illumination technology
- Low energy intelligent digital passenger display systems
- Solar Powered Fare Payment & Ticketing Solutions
- Solar powered climate control systems, AC and Heating for Trueform's growing global passenger hardware market

Solar Energy Management System & Software

→ Solar Energy Management Systems

Trueform's EMS Controllers are specialist designed and engineered high efficiency solar powered LED lighting charge regulator and optimisation units designed to drive high efficiency solar lighting and digital display products.

Activated via dusk or on activation of a switch input or infrared device, the controller is optimised to preserve the battery against excessive drain, regulate charging and prevent overcharging.

Highly flexible, the system designs ensures they can take a large variety of Solar PV modules.

Energy Saving Algorithm

The EMS system utilizes software based energy saving algorithms which allows the controller to continuously assess the battery condition and to adjust the output of the LED lighting units accordingly. This ensures the batteries are never drained to a detrimental level.

TfL Solar Bus Stop System

→ Introduction

Manufactured, installed and maintained by Trueform, leading solar bus stop product and bus stop solar electronics system. Provides illumination of flag and timetable display throughout the hours of darkness.

Client:

Transport for London

Product:

Solar Powered Bus Stop Information System

Specification:

- Glass Tedlar PV Solar Array
- Bi-Pass Diodes
- Energy Management & Charge Regulator
- LED Flag Down Lights & Timetable Display
- 17,000 sites throughout Greater London
- Solar Lighting
- Solar Audio Announcement Option
- Solar Electronic RTI Display Option

Solar Bus Shelter Systems

→ Custom Made Solar Shelter Systems

Trueform supply a range of solar lighting modules for a wide range of bus shelter designs, including flat, curved and pitch roof configurations.

Trueform's solar lighting systems can be custom made to fit new shelters or retro fit existing shelters to suit all customer requirements.

Features Include

- LED Energy Efficient Lighting Modules
- Energy Management System
- High Performance Solar Panels
- Specialist Wiring Loom Assemblies
- Long Life High Performance Solar Batteries
- Passive Infra-Red Detection
- Auto System Management & Power Save
- Light Output Adjustment - 'bright up' facility

Anti Vandal Rail Waiting Shelter

Designed specifically for rail platforms and bus waiting applications, the robust Metroplan anti-vandal stainless steel shelters are capable of resisting the most determined of vandals by the introduction of a stainless steel structure and special stainless steel glazing system. Stainless steel shelters have been proven to significantly reduce maintenance costs, particularly on unmanned rail stations and vandal prone bus shelter sites

Metal Fabrication Services & Fabricated Products

→ The Company

Founded in 1975, Trueform is a leading company in the design, manufacture, finishing and installation of high-quality construction related fabrication products and services.

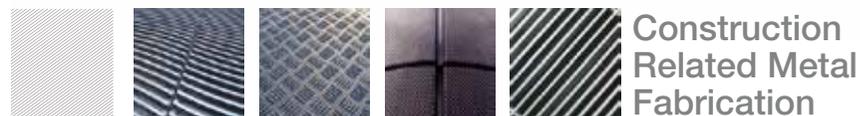

Working with top clients, architects and contractors, Trueform meets the individual needs of customers who expect the very best.

With headquarters and 125,000 sq/ft manufacturing facility in West London, depots throughout the UK and overseas divisions in North America and the Middle East, Trueform offers worldwide experience certified quality service and support in every project phase.

The scope of work includes technical sales advice, budget pricing, tendering, CAD design, engineering, manufacture, finishing, supply and site installation/fitting of any type of construction related fabricated metalworks.

Specialist Areas of Operation

- Construction Related Fabrication Services
- Airport & Transport Infrastructure Fabrication
- Industrial Machine Special Fabrication
- Stainless Steel Fabrication
- Aluminium Fabrication
- CAD Design
- Product Management
- Installation and Site Fitting
- Modular Construction and Site Erection
- Specialist Finishing
- Elevator Engineering Services

Metal Fabrication Services & Fabricated Products

→ Manufacturing Facilities

The 125,000 sq ft production facility in West London, houses some of the most advanced CAD/CAM linked manufacturing equipment available in the industry.

Latest computerised laser processing manufacturing technology and machinery combine with proven procedures, traditional values, skill and experience to deliver competitively priced top quality products.

Trueform's combined expertise in fabrication, sheet metal component and sub-assembly development and product finishing can help customers to minimize time to market by reducing or eliminating problems with production by producing Total Engineering Solutions.

Manufacturing Cells

- Raw material laser processing
- CNC Machining
- CNC Punching
- Folding and forming
- Fabrication
- Assembly line
- Pre-treatment and finishing
- Graphic department
- CAD CAM design
- Production planning and management

Metal Fabrication Services & Fabricated Products

→ Installation & Site Fitting

Trueform's highly experienced and qualified installation, site fitting and contract management personnel work strictly to robust quality and health and safety procedures. Trueform ensure the highest level of quality, time and cost reliability. Close attention to detail, and maximum utilisation of off-site fabrication techniques ensures Trueform's industry respected reputation.

Modular Construction, Site Fitting & Erection Methods

Trueform employs modular construction methods which allows the construction of technically complex fabricated metalwork to be undertaken by offsite manufacturing techniques.

Factory fabricated and assembled, the parts are then broken down, packaged and shipped to site. After delivery to the construction site components can be structurally assembled more quickly, allowing rapid, reliable start up on site and greatly reduced site occupancy times.

Modular manufacturing techniques also allows construction to exacting specifications in a clean environment to ensure a higher quality product than normal on-site methods can achieve.
